Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-14 (cancelled):

Claim 15 (cancelled):

Claim 16 (cancelled):

Claim 17 (currently amended): A process for a production for a reinforced formed part comprising an at least partially hollow metal external formed part filled at least in part with a metal foam, the process comprising the steps of:

forming a an at least partially hollow metal external formed part;

forming a foamable prepreg body comprising a dense body of metal powder admixed with a foaming agent;

locating a the prepreg body within the hollow metal external formed part;

providing heating the prepreg body to provide a metal foam material within said hollow external formed part by foaming the prepreg body within said hollow external formed part; and

simultaneously with the foaming contacting said metal foam material with at least a part of the hollow metal external formed part, so that the foam rests in form-fit relation against the hollow metal external formed part, wherein the density of the metal foam is between 0.3 to 5.0 g/cm^3 .

Claim 18 (currently amended): Process for producing a reinforced formed part with, optionally, longitudinal and/or cross sections differing in form and/or size, the process comprising:

providing an at least partially hollow <u>outer external</u> formed part having an inner cavity;

introducing into the hollow <u>outer</u> <u>external</u> formed part foam material and blowing agent; and

activating the blowing agent so that there is formed in the outer external formed part an open-cell or closed-cell metal foam with high resistance to deformation, which at least partially bears against the outer external formed part, and at least partially fills the inner cavity of the hollow outer external formed part, wherein the density of the metal foam is between 0.3 to 3.0 g/cm³ and the loading properties and resistance to deformation are improved.

Claim 19 (currently amended): Process according to Claim 24, characterized in that wherein the fiber orientation of the material of the outer external formed part runs essentially parallel to its outer contours.

Claim 20 (currently amended): Process according to claim 19 or 24, characterized in that wherein the outer external formed part has comprises a plurality of layers of the same or different materials running parallel to one another and lying one on top of the other, the fiber orientation of which is completely or partially parallel to one another.

Claim 21 (currently amended): Process according to claim <u>17 or</u> 18, characterized in that wherein the materials of the outer

<u>external</u> formed part have one or more layers of cold- or hotworkable material.

Claim 22 (currently amended): Process according to claim 21, characterized in that wherein at least one cold-workable material is selected from the group comprising consisting of metal and lightweight metal.

Claim 23 (currently amended): Process according to Claim 22, characterized in that wherein the cold-workable material is selected from the group consisting of steel, aluminum, magnesium, titanium and alloys of the same.

Claim 24 (currently amended): Process according to elaim claims

17 and 18, characterized in that it wherein the reinforced

formed part has fiber-reinforced materials in the outer external
formed part.

Claim 25 (currently amended): Process according to claim 24, characterized in that wherein the hollow outer external formed part at least partially consists of metal and is produced by an internal high-pressure forming process.

Claim 26 (currently amended): Process according to claim 25, characterized in that wherein the hollow outer external formed part at least partially consists of a polymer, the outer external formed part being created by forming of its at least one-layered material by a forming process known per se, such as casting, thermoforming, blow molding, or else internal high-pressure forming, and is subsequently filled with a metal-foam material.

Appln. No. 10/057,546 Amdt. dated June 10, 2004 Reply to Office action of February 24, 2004

Claim 27 (cancelled):
Claim 28 (cancelled):
